Fix with tool N

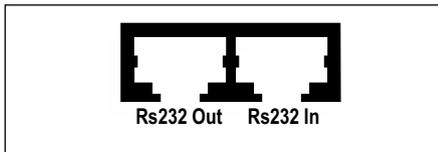

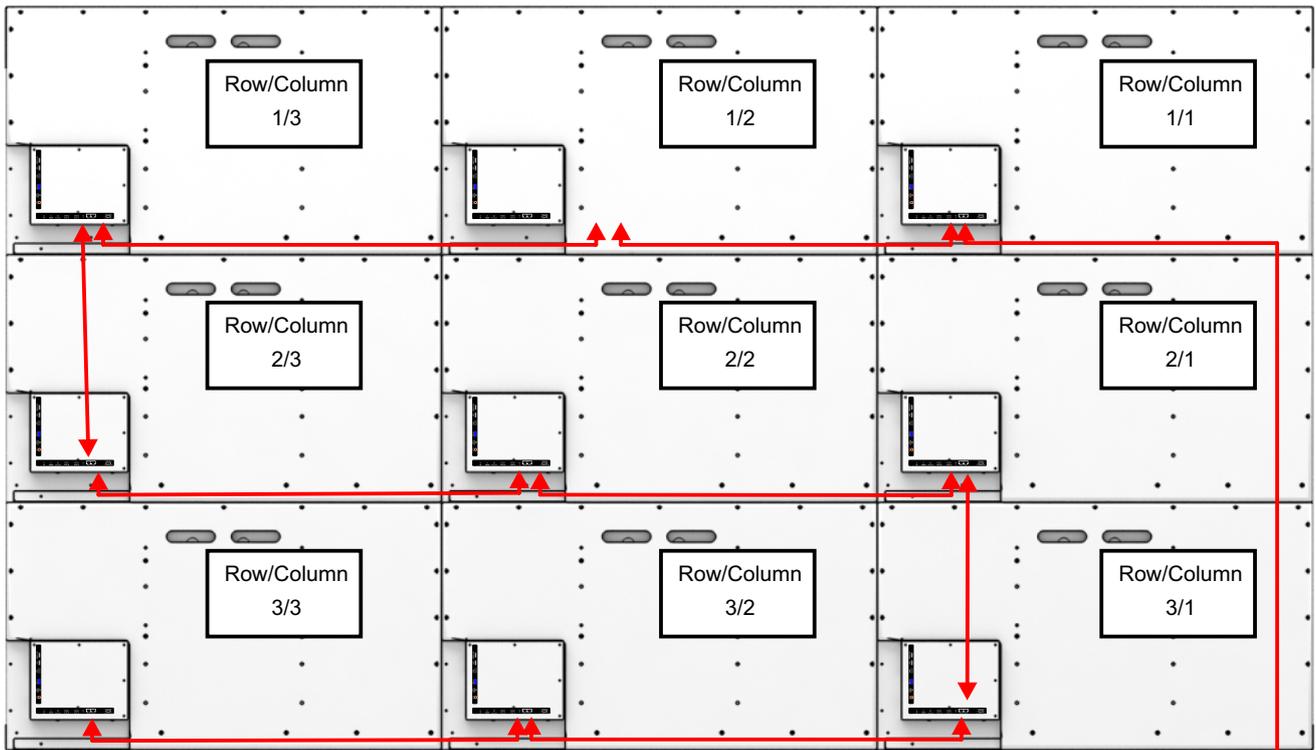

Slide in the screens on the stand. Start with the screen from row 3 and fix it at the requested position/level with the P and Q tools according to figure Y to the left.

Back View

To PC RS232

RS232 connection:

Connect the screens to each other with the supplied RJ45 cables according to the illustration above. From Screen 1/1 connect the RS232 IN to your computer supplied RJ45-RS232 adapter.

Setup the screen split

Connect the Infrared receiver to the screen you want to set.

Access the MENU by pressing **MENU**

Each screen must be set with its own unique ID. See the figure to the right.

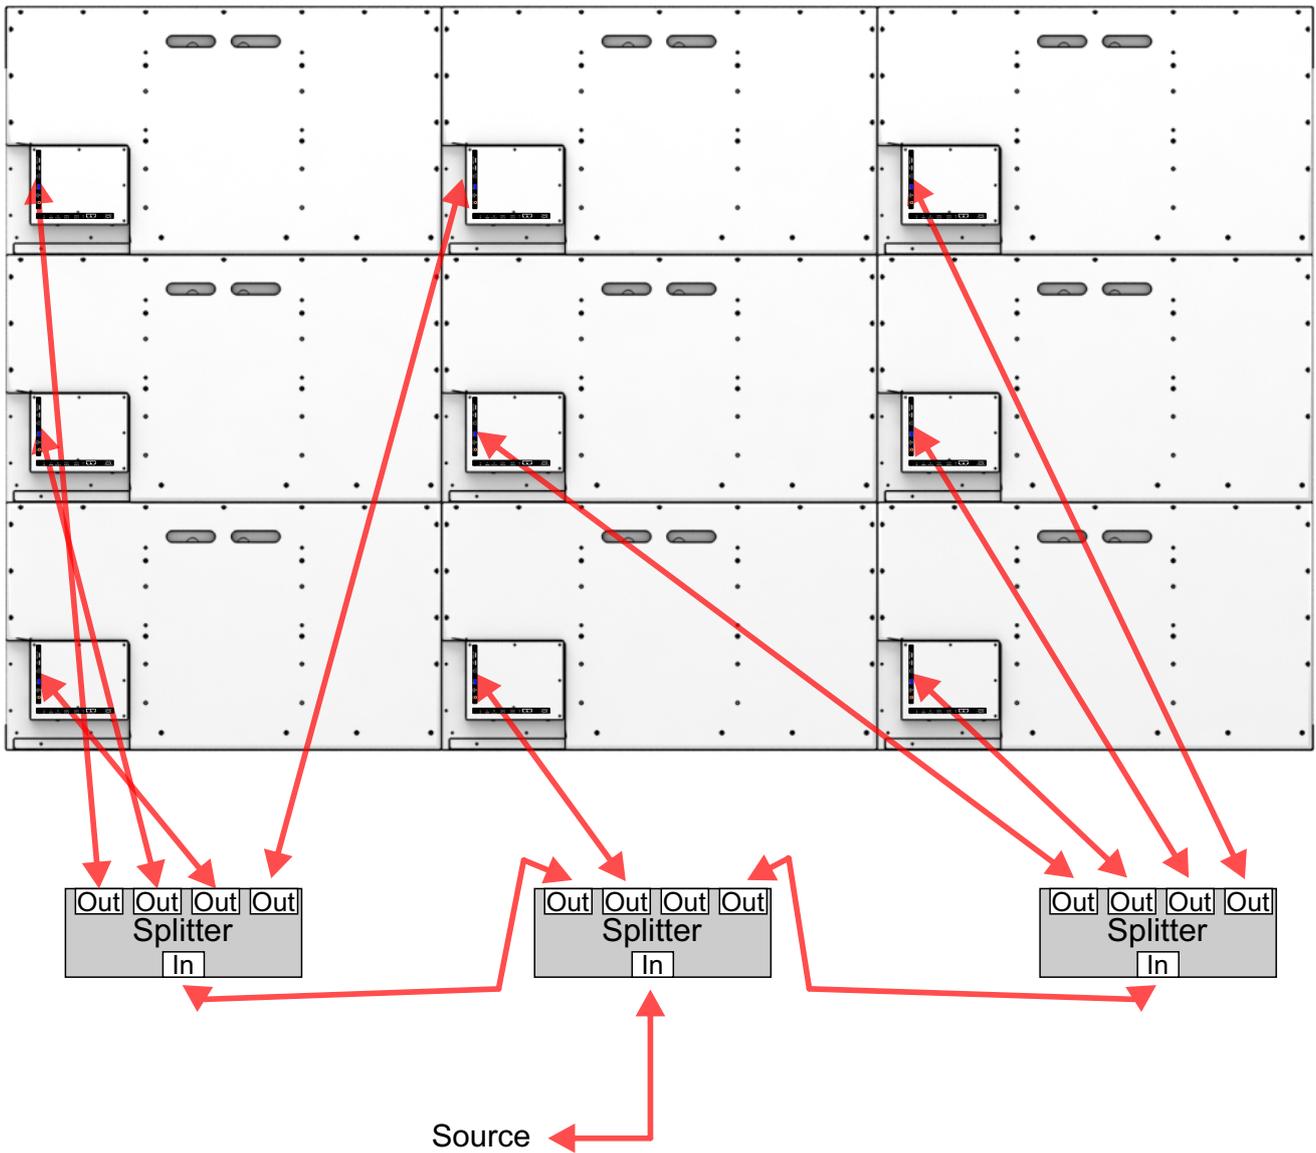

Front View Column1

Column3

	ID 1	ID 2	ID 3
Row 1			
Row 2	ID 4	ID 5	ID 6
Row 3	ID 7	ID 8	ID 9

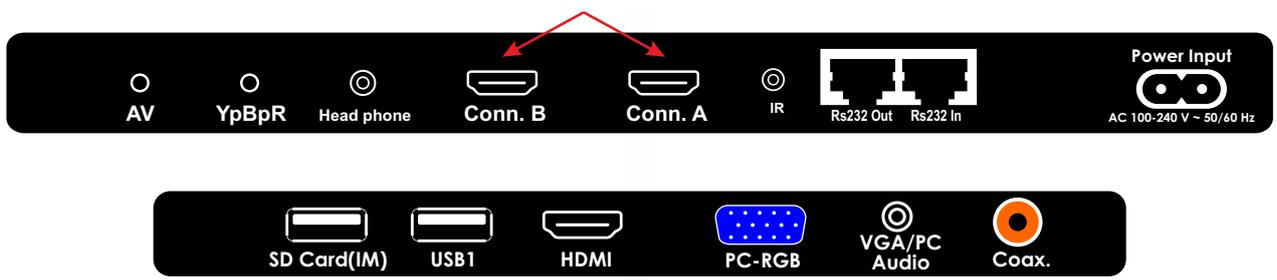

Splitter connection:

In order to achieve 1:1 displaying (tile photo/video on all whole screens) you must use splitters connection (HDMI, VGA, YpBpR or AV). Se the illustration above for example of how to connect.

Inputs

CAUTION Do not connect any HDMI devices to the screen through Conn. A or Conn. B. This may cause damage to the LED screen and the HDMI device. Conn. A and B are exclusively intended to be connected to SWEDX Wave buttons.

Quick user's guide for LCDWALL Control Software

Install the software using the setup file named

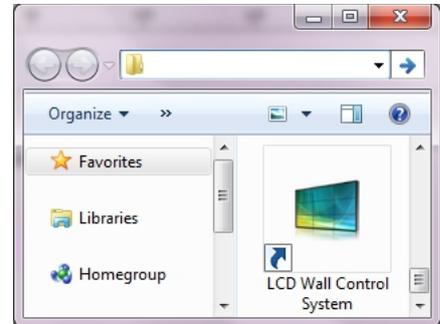

Lcd_bsd_en_ch.EXE

The software can be downloaded from the link below:

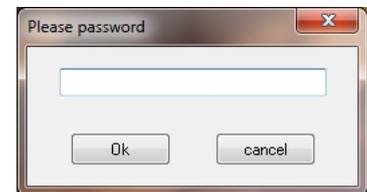

<http://www.swedx.se/download/lcdwall.rar>

Start the program after that the installation is completed using the file named *LCD Wall Control System*

The software will require a password. The default password is **1** and can be changed in the software's System menu.

Main software interface:

System Menu includes:

Set Matrix

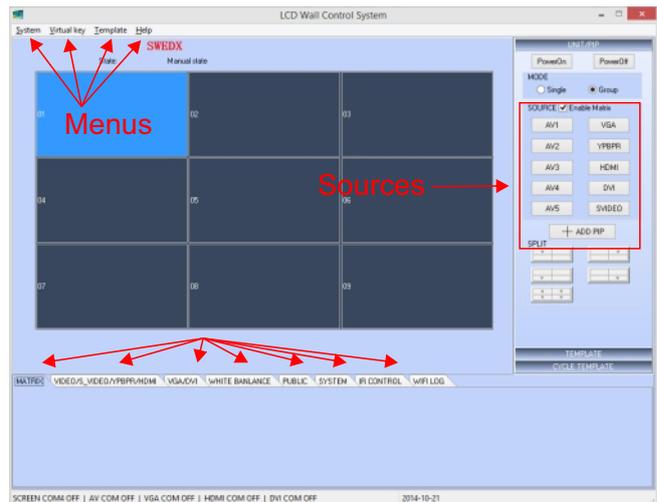

Set Screen

Set Password

Set System

Most operations are made in the Set Screen menu (see next page for details).

The Virtual Key menu will display a virtual remote control which can be used same as the real remote control.

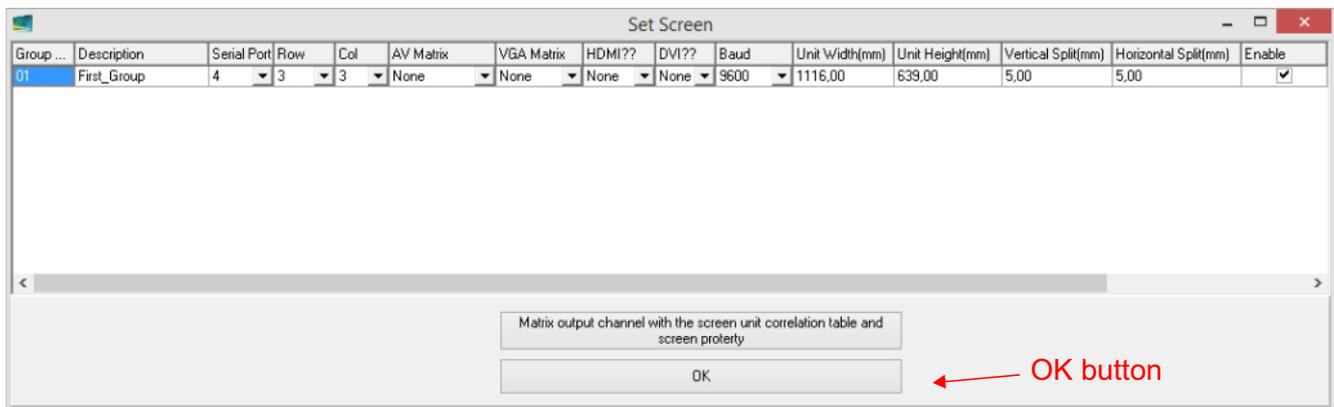

To assign a source to a screen or several, select the screen/screens and select the desired source (see the figure to the right).

To display a source on several screens, select the screens and check the group radio button and then select the desired source.

butcontrol the screen splicing, select the desired configuration (1x2, 2x2, 3x3 or any other configurations) by dragging with the mouse or using mouse+shift key. Click thereafter on the desired source which is connected to the screens.

Use the tabs to make various adjustments.

Set Screen Menu:

Serial Port: Choose the serial port used to connect the Matrix screen to the PC

ROW/COLUMN: Choose the desired configuration, e.g 3x3

Unit Width: The width of the screen

Unit Height: The height of the screen

Vertical Split/Horizontal split: Adjust this values to achieve desired GAP/BEZEL to be removed of the picture sent to the spliced screens (or to compensate the BEZEL).

NOTE: The screens indicate accepting the set configuration by FLASHING (after you click on the OK button). If the screens did not flash, please ensure that the screens are connected to your computer according to the instructions in page 7 and use the Set Screen Menu to set the configuration again.
